

**International Conference on  
Fintech and Banking: Future of Financial Services and  
Regulation**

**In collaboration with New Development Bank, Shanghai and ICAS, Europe**

**Conference Objective**

Currently, the world is witnessing progressive *unbundling of banking* and the increasing use of advanced technologies in banking and financial intermediation. Innovative use of these advanced technologies is being primarily driven by “Fintech Companies”. These fintech innovations and their use are creating disruptive tendencies in the financial sectors.

BRICS countries have also been witnessing these disruptive changes. Fintech applications help financial intermediaries design new financial products and promote financial inclusion, sustainable development, green finance and sustainable infrastructure. Also, there have been incidents across BRICS countries of misuse fintech applications for facilitating financial crimes. Again, use of fintechs especially in the matter of private digital currencies has potential implications for financial stability. These developments demand timely and optimal regulatory response, sometime beyond the defined contours of extant financial regulations.

The Conference brings together officials of Central Banks, Development bank, Commercial Banks and Financial Technology companies of BRICS countries.
